J. Bacteriol. 174:6981-6991 (1992).

J. Bacteriol. 176:5981-6991 (1992).

-i. FUNCTION: TOGETHER WITH FLAVODOXIN IS INVOLVED IN THE REDUCTIVE ACTIVATION OF COBALAMIN. INDEPENDENT METHIONINE SYNTHASE, PYROVATE FORMATE LYASE AND ANAEROBIC RIBONUCLEOTIDE REDUCTASE. ALSO PROTECTS AGAINST SUPEROXIDE RADICALS DE TO METHYL VIOLOGEN IN THE PRESENCE OF OXYGEN (BY SIMILARITY).

-i. CATALYTIC ACTIVITY: REDUCED FERREDOXIN + NADP(+) - OXIDIZED FERREDOXIN + NADPH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FERREDOXIN--NADP REDUCTASE (EC 1.18.1.2) (FNR) (FLXR) (METHYL VIOLOGEN RESISTANCE PROTEIN A) (FPR OR MVRA.

CATALYTIC ACTIVITY: PREFERENTIAL CLEAVAGE: ASP-|-XAA >> AS-
MET-|-XAA, SER-|-XAA.

SUBCELLULAR LOCATION: CYTOPLASMIC GRANULES OF CYTOLYTIC T-
LYMPHOCYTES AND NATURAL KILLER CELLS.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS
TRYPSIN FAMILY. STRONGEST TO OTHER GRANZIMES AND TO MAST O
PROTEASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        teins 4:190-204(1988).

FUNCTION: THIS ENZYME IS NECESSARY FOR TARGET CELL LYSIS IN CELL-MEDIATED IMMUNE RESPONSES. IT CLEAVES AFTER ASP. SEEMS TO BE LINKED TO AN ACTIVATION CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEASES) RESPONSIBLE FOR APOPTOSIS EXECUTION. CLEAVES CASPASE-3, -7, -9 AND 10' TO GIVE RISE TO ACTIVE ENZYMES MEDIATING

JASANOFE A. WAGNER G., WILEY D.C.;

Structure of a trimeric domain of the MHC class II-associated chaperonin and targeting protein II.";

EMBO J. 17.6812-6818(1998).

- PROCTION: PLAYS A CRITICAL ROLE IN MHC CLASS II ANTIGEN PROCESSING PROCESSING PROMOTICS. FREE CLASS II ALPHA/BETA HETERODIMERS IN A COMPLEX SOON AFTER THEIR SYNTHESIS AND DIRECTING TRANSPORT OF THE COMPLEX FROM THE ENDOPLASMIC RETICULM TO COMPARTMENIS WHERE PEPTIDE LOADING OF CLASS II TAKES PLACE.

- PEPTIDE LOADING OF CLASS II TAKES PLACE.

- PEPTIDE LOADING OF CLASS II TAKES PLACE.

- PEPTIDE LOADING OF CLASS II THE ALPHA/BETA/GAMMA HETEROTRIMERS.

- SUBUNT: NONAMER COMPOSED OF THEE ALPHA/BETA/GAMMA HETEROTRIMERS.

- SUBULTARITY: CONTAINS I THYROGLOBULIN TYPE-I DOMAIN.

- SINILARITY: CONTAINS I THYROGLOBULIN TYPE-I DOMAIN.

- PATABASE: NAME-PROW; NOTE-CD Guide CD74 entry.

HISTIDINOL-PHOSPHATE AMINOTRANSFERASE (EC 2.6.1.9) (IMIDAZOLE ACETOL-
PHOSPHATE TRANSAMINASE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BARNES W.M., HUSSON R.N., WHITTIER R.;

Submitted (AUG-1989) to the EMBL/Genbank/DDBJ databases.

1. CATALYTIC ACTIVITY: L-HISTIDINOL-PHOSPHATE + 2-OXOGLUTARATE = 3-(IMLDAZOL-4-YL)-2-OXOGROPYL PHOSPHATE + GLUTAMATE.

1. COFACTOR: PYRIDOXAL PHOSPHATE.

1. PATHWAY: EIGHTH STEP IN HISTIDINE BIOSYNTHETIC PATHWAY.

1. SUBUNIT: HOMODIMER.

1. SUBUNIT: HOMODIMER.

1. SIMILARITY: BELONGS TO CLASS-II OF PYRIDOXAL-PHOSPHATE-DEPENDENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright.
